Subiecta

Alkylating agents 339
Alternant and non-alternant systems, VB analysis of ~ 227

Bis-(π-allyl)nickel 93
Brueckner orbitals 297

CH_2Be, ground states of ~ 103
CH_2Li^-, ground states of ~ 103
Chiroptical properties 49
Configuration interaction 249
Cyclic α-diketones 49

Diagrammatic perturbation theory 297

Electric polarizability tensor 1
Ethylene oxide 329
Excited states of *p*-benzoquinone 345

Frontier molecular orbital model 149, 163

γ-aminobutyric acid, conformation of ~ 317
Genealogical construction 289
Generalized natural orbitals 297
Guanine 339

Half-electron method 125
Hartree-Fock-problem 149, 163
High spin-low spin crossover 87
Hydrogen bonding 249
Hydrogen bridges in formamide polymers 221

Independent spin eigenfunctions 289
Inorganic ring systems with equal atoms 37
Ion hydration 249
Isopotentials 339

Localized orbitals 11
Low-lying singlet and triplet states of ~ 329

Magnetic circular dichroism spectra 135
Methanethiol dimer 25
7-methyladenine 135
9-methyladenine 135
Mössbauer spectra 67
Myoglobin-CO complex 67

$Ni(CO)_4$ 241
$Ni(PF_3)_4$ 241

ω-Technique 117
Open-shell methods, comparison of ~ 125
Orthogonalized hybrid orbitals 109

Pair natural orbitals 275
p-benzoquinone 345
Permanganate ion 309
Polarizability tensor, electric, components of ~ 1
Polymethines 351
Pseudo natural orbitals 275

Quaterphenyl di-valent ion 145

Radicals, ionization potentials of ~ 237
Roothaan open-shell method 125

Saturated hydrocarbons 109
Schiff base complexes of Co(II) 231
Semiempirical equivalent orbital method 181
Spin-pairing method 289
Streptopolymethines 351
Substituted carbonyls 195
Sulphur compounds 77

Terphenyl di-valent ion 145
Transferability of localized orbitals 11
Transition metals 241
Transition metal complexes 87

Unsaturated hydrocarbons 11

Vibrational spectra 25

Weak hydrogen bonds 25
Weak molecular interaction 207, 215

X-ray transitions 77

Instructions to Authors

Manuscripts should be *submitted in duplicate*, typed in double-line spacing on one side of the paper only. Form and contents should be carefully checked to exclude the need for corrections in proof. The author should mark in the margin where diagrams and tables should be inserted.

To speed up publication, authors will receive only *one set of proofs:* provisionally numbered page proofs. Authors are requested to correct typographical errors only; they will be charged for corrections involving changes, additions, or deletions to the original manuscript.

Formulae should be typewritten whenever possible, special attention being given to the placing of indices and exponents so that they are recognizable as such even though there is no difference in size. Formulae should preferably be written in a "linear" form e. g. $\exp(-\varepsilon/kT)$ instead of $e^{-\frac{\varepsilon}{kT}}$). Special typefaces (Greek, Script) should be shown by underlining in color. To avoid confusing the printer, please use red for Greek and green for Script, and underline in brown for bold face.

The following are *frequently confused:*

$\cup, \upsilon, \bigcup, U$; $\circ, o, O, 0$; $\times, x, X, \varkappa, \chi$; $\vee, v, \nu$; $\theta, \Theta, \phi, \varphi, \Phi, \varnothing, \emptyset$; ψ, Ψ; $\varepsilon, \in$; $1, l$:

a', a^1; the symbol a and the indefinite article a;

also the handwritten Roman letters:

c, C; e, l; I, J; k, K; o, O; p, P; s, S; u, U; v, V; w, W; x, X; z, Z;

Please take care to distinguish them in some way: preferably small letters should be underlined once and capital letters twice.

The papers should be preceded by an *English summary* of not more than 100 words. Papers not written in English should have an English translation of the title.

Immediately following the summary, a list of *key words* (not exceeding five items normally) should be supplied for subject indexing.

Literature references should be numbered and listed at the end of the paper. They should be cited as follows: *journal papers* — names and initials of all authors, journal with abbreviations according to the I.U.P.A.C. list (Chemical Abstracts, Vol. 55, 1961), volume and page number, year in parentheses; *books* — names of authors, full title, edition, place, publisher and year. References should be cited in the text by number.

Figures, graphs, tables and structural formulae should be separated from the text and be numbered. Original drawings and graphs should be made in Indian ink with lines of uniform thickness. Authors should keep in mind that drawings will be reduced to a size not exceeding 12 × 19,5 cm. In general it should be assumed that the same degree of reduction will apply to all figures in the same paper. Inscriptions should allow for any reduction in scale — a capital letter should be about 1.8 mm in height in the final version. Computer print-outs should be black and evenly printed to allow direct reproduction.

Captions, which should be brief, should be typed separately and attached to the manuscript.
